How to Unpack and Install the Wheels

1) Remove the packing material from the top of the box.
2) Pull the entire unit up carefully by the plastic bag. **DO NOT PULL entire unit by grabbing the components** as this may damage the model.
3) Remove the Styrofoam pieces that are protecting the individual parts.
4) The only assembly that is required prior to operating the unit is to install the two wheels, which are packed separately from the unit.
5) Snap each wheel into place by aligning the white line on each wheel with the white line on the axle. The wheels are positioned securely on the axle once you hear an audible "snap" sound.
6) Gently tighten the screws by using a small phillips screwdriver.
